COMPLETE 16-WEEK ROADMAP

A Day-by-Day Plan for Problem Solving, DSA, Software Engineering and Job Search

1 November 2026 – 20 February 2027

Daily detail 112 days with a topic, concrete task and flexible practice target.
Three tracks Competitive programming + software engineering skills + job applications.
Designed for your goal Grow from frontend developer experience toward broader Software Engineer capability while searching for a job now.

Important: This plan is a practical guide, not a guarantee of a job or rating. Use the problem targets flexibly, take breaks, protect your sleep, and adjust the schedule when interviews or personal responsibilities require it.

How to use this PDF

• Complete the day's task before marking it done. A problem solved with understanding is more valuable than several copied solutions.

• Try independently for 30–60 focused minutes before asking for a hint, depending on difficulty. If you read an editorial, close it and implement the idea yourself.

• Keep a mistake log: problem, why your approach failed, the key idea, complexity, and date to retry.

• Keep applying for jobs from Day 1. Do not wait until Week 16.

• The target number of problems is flexible. If a topic is weak, spend another day on it.

1. Weekly Overview

Week	Main focus	Milestone
1	String, set, arrays, complexity	Understand unique letters, frequency and basic containers.
2	Sorting, implementation, maths	Translate simple statements into correct code.
3	Brute force, counting, greedy intro	Explain a basic approach and test edge cases.
4	Prefix sum, two pointers intro	Complete first month review.
5	Prefix sums and subarrays	Handle cumulative sums and range queries.
6	Two pointers, sliding window, binary search	Recognise when sorted order/window helps.
7	Stack, queue, deque	Choose common data structures appropriately.
8	Recursion, bits, greedy, STL review	Complete second month review.
9	Linked list, trees	Understand nodes, pointers and traversals.
10	Graphs, BFS, DFS	Traverse a graph/grid and track visited nodes.
11	DP introduction	Define states, transitions and base cases.
12	Basic DP + LeetCode	Begin interview-style DSA practice.
13	Mixed problems and weak topics	Solve problems without relying on topic labels.
14	Core DSA revision	Reinforce binary search, greedy, graph/tree and DP basics.
15	Timed practice and mock interviews	Explain code and projects clearly.
16	Final review and job readiness	Create next plan based on evidence and job-search results.

2. Daily Schedule Template

Block	Suggested focus	Time
Concept + revision	Learn one topic and revisit previous mistakes.	2 h
Independent problem solving	Attempt problems before looking at editorials.	2 h
Practice + testing	Continue practice; test edge cases and complexity.	2 h
Software engineering	JavaScript/React, API integration, debugging, Git, tests or project work.	1.5 h
Interview DSA	Explain solutions aloud and practise interview questions.	1.5 h
Job search + review	Applications, follow-ups, mistake log and tomorrow's plan.	1 h

This is an example of about 10 planned work hours. It is not a requirement to work 12 hours every day. Take regular breaks and keep sleep and health a priority.

Week 1 — String, Set and Foundation

Dates: 01 Nov 2026 – 07 Nov 2026

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 1: Sun, 01 Nov — String + Pangram

Task: Revisit the pangram problem. Think through case-insensitive letters, unique characters and how to verify all 26 letters.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 2: Mon, 02 Nov — Array & Vector

Task: Practise traversal, indexing, min/max, sum and counting. Explain when vector is convenient compared with a fixed array.

Practice target: 2–4 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 3: Tue, 03 Nov — String operations

Task: Practise length, indexing, character comparisons, lowercase/uppercase conversion and counting letters.

Practice target: 2–4 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 4: Wed, 04 Nov — Set basics

Task: Use the idea of uniqueness to solve distinct-element and duplicate-removal problems. Compare set with vector.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 5: Thu, 05 Nov — Map / frequency

Task: Practise frequency counting with map or unordered_map. Decide when you need unique values versus counts.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 6: Fri, 06 Nov — Complexity basics

Task: Estimate O(1), O(n), O(n log n) and O(n^2). Analyse loops and a simple nested loop; revisit the week's hardest problem.

Practice target: 1–2 problems + review

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 7: Sat, 07 Nov — Weekly review

Task: Re-solve two earlier problems without notes. Write down errors, edge cases and topics that still feel confusing.

Practice target: Timed mini-set

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 2 — Sorting, Implementation and Basic Math

Dates: 08 Nov 2026 – 14 Nov 2026

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 8: Sun, 08 Nov — Sorting basics

Task: Sort values ascending and descending; understand what sort changes and how to verify sorted order.

Practice target: 2–4 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 9: Mon, 09 Nov — Pairs and sorting

Task: Practise pair, sorting pairs and tie-breaking. Trace one example by hand before coding.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 10: Tue, 10 Nov — Implementation

Task: Translate each statement into input, output, rules and small steps. Focus on careful conditions and simulation.

Practice target: 2–4 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 11: Wed, 11 Nov — Basic math

Task: Practise parity, divisibility, remainder, integer division and boundary values.

Practice target: 2–4 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 12: Thu, 12 Nov — GCD and LCM

Task: Understand Euclid's algorithm for gcd and how lcm relates to gcd. Practise simple number problems.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 13: Fri, 13 Nov — Mixed practice

Task: Choose unseen easy problems from strings, arrays, sorting and maths. Avoid reading the topic tag before trying.

Practice target: 3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 14: Sat, 14 Nov — Review + contest

Task: Take a short timed practice set. Review every wrong answer and redo at least one without looking at code.

Practice target: Timed mini-contest

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 3 — Brute Force, Counting and Greedy Introduction

Dates: 15 Nov 2026 – 21 Nov 2026

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 15: Sun, 15 Nov — Brute force

Task: Generate the simplest correct approach first. Check whether constraints allow it; practise small loops and direct simulation.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 16: Mon, 16 Nov — Frequency patterns

Task: Solve problems about repeated values, most/least frequent elements and counting occurrences.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 17: Tue, 17 Nov — Distinct / set patterns

Task: Practise distinct letters, unique numbers and membership checks. State clearly what counts as a duplicate.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 18: Wed, 18 Nov — Pair-based problems

Task: Use nested loops on small constraints; learn to identify when $O(n^2)$ may be too slow.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 19: Thu, 19 Nov — Greedy intuition

Task: For simple tasks, ask what choice seems best now and why it will not block a better result later.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 20: Fri, 20 Nov — Implementation drill

Task: Solve a few easy problems under a timer. Before submission, test minimum input and repeated/equal values.

Practice target: 3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 21: Sat, 21 Nov — Weekly review

Task: Summarise brute force, counting and the first greedy examples in your own words; re-solve one failed problem.

Practice target: Review + timed set

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 4 — Prefix Sum and Two Pointers Introduction

Dates: 22 Nov 2026 – 28 Nov 2026

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 22: Sun, 22 Nov — Prefix sum idea

Task: Build cumulative sums on paper and use them to answer range-sum queries.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 23: Mon, 23 Nov — Prefix sum implementation

Task: Practise prefix arrays, indexing carefully and handling a range from l to r.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 24: Tue, 24 Nov — Two pointers basics

Task: Use two indices on a sorted array to search for a pair or move inward based on a condition.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 25: Wed, 25 Nov — Two pointers practice

Task: Trace pointer movement and explain why each move is safe. Compare with checking every pair.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 26: Thu, 26 Nov — Mixed arrays

Task: Combine sorting, prefix sum and two pointers in beginner problems; identify the pattern only after trying.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 27: Fri, 27 Nov — Month 1 checkpoint

Task: Revisit all weak topics. Attempt 3 unseen 800-level problems, allowing hints only after a genuine attempt.

Practice target: 3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 28: Sat, 28 Nov — Monthly review

Task: Review progress and update your mistake log. Check CV, portfolio and job applications; do not pause job search.

Practice target: Review + applications

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 5 — Prefix Sums, Frequency and Subarray Basics

Dates: 29 Nov 2026 – 05 Dec 2026

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 29: Sun, 29 Nov — Prefix sum revision

Task: Implement prefix sums from memory and explain the formula for a range sum.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 30: Mon, 30 Nov — Difference between subarray and subsequence

Task: Learn the distinction using examples. Practise simple contiguous-segment questions.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 31: Tue, 01 Dec — Frequency arrays

Task: Use an array for small bounded values and map for larger or sparse values; compare trade-offs.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 32: Wed, 02 Dec — Prefix sum edge cases

Task: Practise zero-based versus one-based indexing, empty prefixes and inclusive endpoints.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 33: Thu, 03 Dec — Subarray sums

Task: Solve beginner tasks involving sums of contiguous elements; start with brute force, then look for improvement.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 34: Fri, 04 Dec — Mixed practice

Task: Pick problems without topic labels from recent concepts. Write down why the chosen approach works.

Practice target: 3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 35: Sat, 05 Dec — Review

Task: Re-solve a prefix-sum problem from scratch and explain complexity aloud as if in an interview.

Practice target: Review + timed set

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 6 — Two Pointers, Sliding Window and Binary Search

Dates: 06 Dec 2026 – 12 Dec 2026

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 36: Sun, 06 Dec — Two pointers revision

Task: Practise sorted-array pair search, removing duplicates conceptually and pointer movement.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 37: Mon, 07 Dec — Sliding window basics

Task: Understand a fixed-size window and update its sum/count as it moves.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 38: Tue, 08 Dec — Variable window intuition

Task: Study simple positive-number cases where a window expands or shrinks based on a condition.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 39: Wed, 09 Dec — Binary search concept

Task: Understand search on sorted data, low/high/mid and why the search range shrinks.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 40: Thu, 10 Dec — Binary search implementation

Task: Practise boundary conditions, not-found cases and off-by-one errors.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 41: Fri, 11 Dec — Mixed technique practice

Task: For each problem, decide whether brute force, two pointers, window or binary search fits.

Practice target: 3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 42: Sat, 12 Dec — Review + timed practice

Task: Re-solve one binary-search problem and one two-pointer/window problem without notes.

Practice target: Timed mini-set

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 7 — Stack, Queue and Deque

Dates: 13 Dec 2026 – 19 Dec 2026

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 43: Sun, 13 Dec — Stack

Task: Understand LIFO and practise push, pop, top and empty checks; solve a simple matching/order problem.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 44: Mon, 14 Dec — Queue

Task: Understand FIFO and practise push, pop, front and empty checks.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 45: Tue, 15 Dec — Deque

Task: Learn insertion/removal at both ends and recognise simple use cases.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 46: Wed, 16 Dec — Monotonic idea introduction

Task: Explore why a stack can help with previous/next greater-element patterns; keep examples small.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 47: Thu, 17 Dec — Data-structure selection

Task: Choose vector, set, map, stack, queue or deque for short scenarios and justify the choice.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 48: Fri, 18 Dec — Mixed practice

Task: Solve easy problems involving stack/queue plus one earlier topic.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 49: Sat, 19 Dec — Review

Task: Implement basic operations from memory and summarise when each structure is useful.

Practice target: Review + timed set

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 8 — Recursion, Bit Basics and Greedy Practice

Dates: 20 Dec 2026 – 26 Dec 2026

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 50: Sun, 20 Dec — Recursion basics

Task: Identify base case and recursive step; trace a simple function by hand.

Practice target: 2 small exercises

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 51: Mon, 21 Dec — Recursion practice

Task: Solve simple factorial, sum or string/array recursion exercises; compare with iteration.

Practice target: 2 exercises

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 52: Tue, 22 Dec — Bit manipulation intro

Task: Understand binary representation, AND, OR, XOR and checking a bit; do not overfocus on tricks.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 53: Wed, 23 Dec — Greedy practice

Task: Solve simple sorting/selection problems. Explain why the local choice works or find a counterexample.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 54: Thu, 24 Dec — STL revision

Task: Review vector, string, set, map, pair, sort, reverse and common operations.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 55: Fri, 25 Dec — Month 2 mixed test

Task: Attempt a small unseen set from prefix sum, two pointers, binary search, stack/queue and greedy.

Practice target: 3–4 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 56: Sat, 26 Dec — Monthly review

Task: Record strongest/weakest topics and adjust next month. Keep applying for suitable roles.

Practice target: Review + applications

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 9 — Linked List and Tree Foundations

Dates: 27 Dec 2026 – 02 Jan 2027

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 57: Sun, 27 Dec — Linked list concept

Task: Understand nodes, next pointers, head and traversal. Draw the links before reading code.

Practice target: Concept + trace

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 58: Mon, 28 Dec — Linked list operations

Task: Study insertion, deletion and common pointer mistakes; implement only after understanding the diagrams.

Practice target: 2 exercises

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 59: Tue, 29 Dec — Tree vocabulary

Task: Learn root, child, leaf, depth, height and subtree with small diagrams.

Practice target: Concept + trace

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 60: Wed, 30 Dec — Binary tree traversal

Task: Understand preorder, inorder and postorder; trace a small tree by hand.

Practice target: 2 exercises

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 61: Thu, 31 Dec — BST basics

Task: Understand the binary search tree ordering rule and search idea.

Practice target: 1–2 exercises

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 62: Fri, 01 Jan — Tree practice

Task: Implement or trace basic traversal and search; explain recursion's role.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 63: Sat, 02 Jan — Review

Task: Revisit linked list/tree concepts and write a short explanation of each without notes.

Practice target: Review

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 10 — Graphs, BFS and DFS

Dates: 03 Jan 2027 – 09 Jan 2027

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 64: Sun, 03 Jan — Graph representation

Task: Learn vertices, edges, adjacency list and adjacency matrix; practise an undirected graph example.

Practice target: 2 exercises

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 65: Mon, 04 Jan — BFS

Task: Understand queue-based breadth-first search and visit tracking.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 66: Tue, 05 Jan — DFS

Task: Understand recursive or stack-based depth-first search and visited tracking.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 67: Wed, 06 Jan — Connected components

Task: Use BFS/DFS to count components in a small graph/grid.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 68: Thu, 07 Jan — Grid traversal

Task: Practise movement directions, bounds checks and visited arrays.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 69: Fri, 08 Jan — Graph review

Task: Compare BFS and DFS, their common uses and complexity in adjacency-list graphs.

Practice target: 2 exercises

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 70: Sat, 09 Jan — Weekly review

Task: Re-solve a basic traversal problem and explain it aloud.

Practice target: Review + timed set

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 11 — Dynamic Programming Introduction

Dates: 10 Jan 2027 – 16 Jan 2027

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 71: Sun, 10 Jan — DP intuition

Task: Recognise overlapping subproblems and repeated calculations; compare naive recursion with memoization.

Practice target: Concept + trace

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 72: Mon, 11 Jan — Fibonacci

Task: Implement or trace recursive, memoized and iterative versions; compare complexity.

Practice target: 2 exercises

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 73: Tue, 12 Jan — Climbing stairs

Task: Define the state, transition and base cases before coding.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 74: Wed, 13 Jan — Memoization

Task: Practise storing computed results and handling uncomputed states clearly.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 75: Thu, 14 Jan — Tabulation

Task: Build a bottom-up table and understand iteration order.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 76: Fri, 15 Jan — DP debugging

Task: Test smallest cases and verify transitions manually. Do not memorise a formula without understanding it.

Practice target: 2 exercises

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 77: Sat, 16 Jan — Review

Task: Explain state, transition, base case and answer state in your own words.

Practice target: Review

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 12 — Introductory DP and LeetCode

Dates: 17 Jan 2027 – 23 Jan 2027

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 78: Sun, 17 Jan — Knapsack idea

Task: Understand the choice to take/not take an item at a conceptual level; draw a small example.

Practice target: Concept + trace

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 79: Mon, 18 Jan — 1D DP practice

Task: Solve a beginner problem with a small state array; explain each transition.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 80: Tue, 19 Jan — LeetCode setup

Task: Start Easy interview problems on arrays/strings; explain solution and complexity before coding.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 81: Wed, 20 Jan — Hashing for interviews

Task: Practise frequency maps, duplicate detection and simple lookup problems.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 82: Thu, 21 Jan — Mixed DSA

Task: Combine array/string, binary search, stack/queue and a basic tree problem.

Practice target: 3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 83: Fri, 22 Jan — Timed practice

Task: Do a small timed set, then spend enough time reviewing mistakes.

Practice target: 3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 84: Sat, 23 Jan — Monthly review

Task: Assess DSA readiness, project explanation and application progress. Prioritise interview invitations when they arrive.

Practice target: Review + applications

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 13 — Mixed Codeforces and Weak-Topic Repair

Dates: 24 Jan 2027 – 30 Jan 2027

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 85: Sun, 24 Jan — Unlabelled practice

Task: Choose unseen easy problems without looking at the topic tag; describe the likely pattern.

Practice target: 3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 86: Mon, 25 Jan — Weak topic repair 1

Task: Pick your weakest topic from the mistake log and revisit examples, then solve new problems.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 87: Tue, 26 Jan — Weak topic repair 2

Task: Choose another weak topic and practise carefully, focusing on why old attempts failed.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 88: Wed, 27 Jan — Implementation speed

Task: Practise translating simple statements into code while still testing edge cases.

Practice target: 3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 89: Thu, 28 Jan — Complexity analysis

Task: For each solution, write time and space complexity and justify it.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 90: Fri, 29 Jan — Contest simulation

Task: Try a short timed set at a comfortable level; do not check solutions during the set.

Practice target: Timed set

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 91: Sat, 30 Jan — Review

Task: Redo the hardest failed problem from the week and write a concise editorial in your own words.

Practice target: Review

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 14 — Consolidation of Core DSA

Dates: 31 Jan 2027 – 06 Feb 2027

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 92: Sun, 31 Jan — Binary search revision

Task: Practise boundaries, first/last occurrence ideas and sorted-data reasoning.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 93: Mon, 01 Feb — Greedy revision

Task: Solve easy greedy tasks and test whether a local-choice argument is valid.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 94: Tue, 02 Feb — Prefix sum + two pointers

Task: Solve mixed problems and explain why the method is better than brute force.

Practice target: 2–3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 95: Wed, 03 Feb — Stack/queue revision

Task: Revisit operation costs and simple matching/order problems.

Practice target: 2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 96: Thu, 04 Feb — Tree/graph revision

Task: Trace BFS/DFS and solve one basic traversal problem.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 97: Fri, 05 Feb — DP revision

Task: Revisit one beginner DP problem and define state/transition before coding.

Practice target: 1–2 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 98: Sat, 06 Feb — Review

Task: Choose three old problems from different topics and solve them without notes.

Practice target: 3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 15 — Timed Contests and Mock Interviews

Dates: 07 Feb 2027 – 13 Feb 2027

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 99: Sun, 07 Feb — Mock interview 1

Task: Solve one easy DSA question while speaking your approach, edge cases and complexity aloud.

Practice target: 1–2 questions

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 100: Mon, 08 Feb — Project walkthrough

Task: Explain one React project: user problem, architecture, data flow, API calls, errors and trade-offs.

Practice target: Project practice

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 101: Tue, 09 Feb — Timed Codeforces set

Task: Attempt a short set at your current level under contest conditions.

Practice target: Timed set

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 102: Wed, 10 Feb — JavaScript review

Task: Review scope, closures, arrays/objects, promises, async/await and error handling.

Practice target: Concept + questions

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 103: Thu, 11 Feb — React review

Task: Review components, props/state, hooks, rendering, forms, API states and routing.

Practice target: Concept + questions

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 104: Fri, 12 Feb — Mock interview 2

Task: Practise one DSA problem plus behavioural questions about collaboration, debugging and learning.

Practice target: Mock session

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 105: Sat, 13 Feb — Review

Task: Identify interview gaps and prepare short, honest answers; do not claim experience you do not have.

Practice target: Review

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

Week 16 — Final Review and Job Readiness

Dates: 14 Feb 2027 – 20 Feb 2027

Weekly goal: finish the core tasks, identify at least one weak area, and keep the job-search track active.

☐ Day 106: Sun, 14 Feb — Mistake-log day

Task: Re-solve your most important previous failures without looking at the solution.

Practice target: 2–3 re-solves

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 107: Mon, 15 Feb — Mixed DSA assessment

Task: Attempt unseen problems across strings, arrays, hashing, binary search and stack/queue.

Practice target: 3 problems

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 108: Tue, 16 Feb — Algorithm explanation

Task: Explain BFS/DFS and one DP example at a beginner level; review gaps instead of cramming.

Practice target: Concept review

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 109: Wed, 17 Feb — Project polish

Task: Check README, setup instructions, screenshots if useful, environment variables and repository cleanliness.

Practice target: Project task

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 110: Thu, 18 Feb — CV and applications

Task: Tailor CV to suitable roles, verify links and submit targeted applications/follow-ups.

Practice target: Applications

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 111: Fri, 19 Feb — Final mock

Task: Do a timed DSA question, a project walkthrough and a short behavioural interview practice.

Practice target: Mock session

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

☐ Day 112: Sat, 20 Feb — Four-month retrospective

Task: Review what improved, remaining gaps, application results and next 8-week priorities.

Practice target: Plan next phase

Job/engineering habit: Spend at least a short focused block on your CV/portfolio, JavaScript/React interview knowledge, project quality, or a suitable job application. Rotate the focus through the week.

Weekly reflection — problems solved independently: _____ Re-solved: _____ Job applications/follow-ups: _____

What was difficult? _____

Next week's top priority: _____

3. Job Search and Software Engineering Track

Since you need a job urgently, continue applying from the first week while strengthening your skills. Prioritise roles that match your current experience, such as junior frontend/React roles, and expand as your skills grow.

Project readiness checklist

- ☐ I can explain the user problem my project solves.
- ☐ I can describe component structure, state/data flow and routing.
- ☐ I understand how API requests work and how I handle loading, empty, success and error states.
- ☐ I can explain authentication and protected routes used in my project.
- ☐ My README explains features, tech stack and how to run the project.
- ☐ My GitHub, portfolio, LinkedIn and CV links are accurate.
- ☐ I can explain one bug I fixed and the reasoning behind the fix.
- ☐ I understand basic Git workflow, HTTP status codes and environment variables.

Weekly job-search routine

- Apply to a small number of well-matched roles consistently rather than mass-applying blindly.
- Track company, role, application date, job link, status and follow-up date.
- Practise JavaScript, React, basic DSA and project walkthroughs every week.
- When an interview is scheduled, temporarily shift more time toward interview preparation.
- Never exaggerate skills or experience; prepare honest examples of what you built and learned.

4. Problem-Solving Mistake Log

Date / Problem	What went wrong?	Key lesson / retry date

5. Weekly Progress Tracker

Week	Independent solves	Re-solves	Applications / responses	Weak topic to revisit
1	_____	_____	_____	_____
2	_____	_____	_____	_____
3	_____	_____	_____	_____
4	_____	_____	_____	_____
5	_____	_____	_____	_____
6	_____	_____	_____	_____
7	_____	_____	_____	_____
8	_____	_____	_____	_____
9	_____	_____	_____	_____
10	_____	_____	_____	_____
11	_____	_____	_____	_____
12	_____	_____	_____	_____
13	_____	_____	_____	_____
14	_____	_____	_____	_____
15	_____	_____	_____	_____
16	_____	_____	_____	_____

Final reminder

Your aim is to become an engineer who can understand a problem, design a solution, write maintainable code, explain trade-offs, debug carefully and keep learning. Four months can create meaningful progress, but the outcome depends on your starting point, consistency, practice quality and opportunities. Keep job applications active throughout the plan.

Review the plan after Week 4 and Week 8. Adjust based on actual progress rather than forcing yourself to finish every topic on schedule.
